Dimensional Inspection/Measurement

Table with 4 columns: Parameter/Equipment, Range, Expanded Uncertainty of Measurement (+/-), Reference Standard, Method, and/or Equipment. Rows include various inspection types like Dimensional inspection with ranges in mm/in and uncertainties in micrometers.

Calibration and Measurement Capability (CMC) is expressed in terms of the measurement parameter, measurement range, expanded uncertainty of measurement, and reference standard, method, and/or equipment. The expanded uncertainty of measurement is expressed as the standard uncertainty of the measurement multiplied by a coverage factor of 2 (k=2), corresponding to a confidence level of approximately 95%.

Notes:

- 1. This company offers CMM verification of gages, fixtures, and piece parts to customer specifications.
2. The L factor is the length in inches or millimeters.
